

Health Impact Assessment- Exercise #2 Scoping

Using the logic framework below as a guide, in addition to the topics highlighted in the Screening checklist (in Stage 1), assess which impacts are likely to be important in your Housing Scenario and then construct a logic framework identifying the policy components, proximal impacts and health-related outcomes. While developing your logic framework, please keep the following in mind:

1. What are the aims and objectives of the health impact assessment?
2. What are the pathways and determinants of health to be considered?
3. What are the methodologies to be used for evaluating the HIA?

Sample logic framework: **Improving Transportation Infrastructure**
